

EDA Project Final Report

LAVA caffe

Abstract:

The goal of the project is to analyze Riyadh cafes based on people's ratings of most cafes in Riyadh and based on these ratings we will establish a Lava coffee shop

Design:

The data is provided by website and the data represents the different price between café and coffee shops in Riyadh and the most rating of coffee and I did the analysis to answer the questions

What are the top ratings for the coffee in Riyadh ?

Data:

The dataset contains 198 coffee shops in Riyadh with 9 features and the combination of the features

Shop name ,rating ,number of ratings , price , shop type , key words , address

Algorithm:

In the data cleaning phase , I observe that the data set contains null values , and there are 2 columns we remove it in the data set

Tools:

panda , Numpy , Matplotlib , python , Jupyter notebook

ommunication:.
